Liquid & Powder Adapter

Use instructions

1. Fill the glass cuvette with your liquid or powder to about 1-2 mm from the top
2. Carefully place the cuvette into the adapter base
3. Place the lid onto the top of the adapter (this is necessary to block out all ambient light)
4. Firmly hold your Nix device onto the octagonal opening (the USB charging port of the Nix device must face up)
5. Perform your scan, ensuring the device has good contact with the cuvette

PLEASE NOTE: This adapter is measured from the side to eliminate the formation of bubbles. Do not tip onto its back like the low-volume adapter. Keep upright at all times. If you have any questions, please contact us at qc.support@nixsensor.com
