

Get paint matches.
Get inspiration.
Get the job done.

Nix Mini.

nixTM
Color Sensor

Welcome to the world of color, brought to you by Nix.

When it comes to paint and all things color, your Nix Mini is your new best friend.

Trying to find a paint match? We've got that covered, along with color and design inspiration along the way.

HERE'S HOW IT WORKS.

Scan.

Nix Mini Color Sensor can pull color inspiration from anything around you. Just place it on any flat object, tap scan and find the nearest paint matches out of the selected brands.

Explore.

Once you've found your paint match, explore color schemes that work well with your chosen color. This feature is a great way to discover new color palettes and gain confidence in the color selection process.

Stay organized.

Easily create custom projects for clients within your Nix Paints app. Once you've found your final colors, save them to your Projects. To help keep you organized, you can include details like the project name, room type, and any extra notes specific to each project.

Move from swatches to sales.

The Nix hardware and app combo is a full-service solution to your customers' paint needs. Promote your in-store color tool to new and existing customers as a way to quickly and confidently choose color.

TURN YOUR STAFF INTO COLOR EXPERTS.

Never guess a color again.

The Nix Mini and our free Nix Paints app give you accurate color matching in seconds.

Match color without the swatch.

Scan and identify any color from any surface to find its nearest paint match from the brands that you carry in store.

Made for everybody and anybody.

The Nix Mini and its app are so easy to use, no training is needed! Just scan, match and find the right paint color for your customers.

Let the science do the talking, so your staff can do the selling.

Turn your staff into color experts by providing them with a Nix Mini. The app will guide them through paint matches and corresponding palettes so they can speak at ease and with confidence about potential color choices. This will guide customers towards the colors that are right for their projects.

Bring customers in with a stand-out experience.

On its own, the Nix Mini is a must-have color matching tool, but when paired with in-store services, you're creating a streamlined solution to the paint-buying process and customer experience.

SELL MORE WITH NIX IN STORE.

Rent the color matching experience.

Create a Nix Rental Program to allow customers to easily scan and save colors wherever they find inspiration. Once they've found their paint matches, their next step is to return the kit and purchase paint from your store.

TIP: For an even greater customer experience, stores can offer a discount on their paint purchase upon return of the unit.

Optimize the paint-selling process with a self-serve color matching service.

Free up staff time and empower customers by setting up a quick and easy kiosk for color matching needs. With just a tablet and Nix Mini, customers can bring in any item to scan and find the corresponding paint match, plus explore complementary color palettes!

Troubled about troubleshooting? Don't be.

With our Nix product experts just a call, email or Facebook message away, you never have to worry about providing technical support.

If retail staff or in-store customers require any technical assistance they can rest assured knowing that the Nix support team is ready to help.

Coming soon.

Your source for more inspiration and more organization.

We're working on an updated Nix Paints app, named Chip. With this updated app, users will be able to build more robust paint projects, explore curated palettes and other color inspirations, and even connect with contractors to get the job done.

Boost color confidence. Boost your sales.

Chip will arm your customers with everything they need to complete their job. This means they will be ready to purchase their paint and anything they may need for their project in the same visit from your store.
